

Statistics in Python Course

Based on the course https://www.sib.swiss/training/course/20230620_STATP

Swiss Institute of
Bioinformatics

[Wandrille Duchemin.
Introduction to Statistics with Python
<https://doi.org/10.5281/zenodo.15607543>]

Statistics in Python Course

- Session 1 – Data visualisation & exploration
- Session 2 – Distributions & hypothesis testing
- Session 3 – Statistical testing, continued
- Session 4 – Correlation & regression

The image displays two overlapping software interfaces used for data analysis and visualization.

Top Interface (Jupyter Notebook):

- File Explorer:** Shows 'age_data.csv'.
- Code Editor:** Contains Python code for loading and displaying data:

```
[3]: import pandas as pd

# Load the CSV file
df = pd.read_csv('age_data.csv')

# Display the first few rows
df.head()
```
- Output:** A Jupyter logo and a large orange graphic reading "VibeCoding CLAUDE".
- Console/Output Area:** Displays a message: "Perfect! I've successfully loaded your 'age_data.csv' file and displayed the first 5 rows. The data shows:" followed by a list of 4 columns (sex, age, city, country) and a data sample with 3 rows.

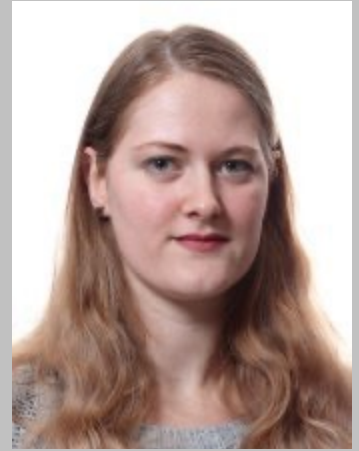

Bottom Interface (VS Code):

- File Explorer:** Shows '03_exploratory_visualisation_with_seaborn.ipynb'.
- Code Editor:** Contains Python code for loading and displaying data (similar to the top interface).
- Output:** A large orange graphic reading "VibeCoding CLAUDE".
- Console/Output Area:** Displays a message: "I notice there are some missing age values (shown in the notebook):" followed by a list of 4 columns (sex, age, city, country) and a data sample with 3 rows.
